

**Market-Leading Hemp Genetics
For Greenhouse and Field Production
For the 2022 Season**

GRIFFIN

The Hemp Mine breeds market-driven, regulatory-compliant^a varieties with traits suitable for different markets, including CBD^b and CBG^b, extraction and smokable flower, greenhouse and field cultivation. Proven performance over multiple seasons in trials around the country.

Peach Haze 10-13% CBD

High yielding sativa hybrid producing loads of resin. Distinctive terpene profile which dances between a very sweet peach aroma and dank Diesel. Semi auto-flowering.

Indoor cultivation. Smokable flower. Available as feminized seeds, URCs, and liners.

FunDip 14-16% CBD

This new variety is a triple threat. High yields, dense flower, and THM's highest terpenes ever, testing at over 4%. The flower aroma will fill up a room with scents of FunDip candy. Semi-autoflowering.

Indoor or field. Smokable flower. Available as URCs and liners.

THM Jack 10-12% CBD

High yielding sativa with a distinctive terpene profile. Could be compared to the legendary 'Jack Herer' with pine and turpentine overtones. Semi auto-flowering.

Indoor cultivation. Smokable flower. Available as URCs and liners.

Belle 9-12% CBD

THM's showstopper variety! Extremely high yields and disease resistance. Unique, juicy-fruit terpene profile that persists under poor curing conditions. Bright pink pistils, early stacking and late THC spike. Photoperiodic.

Indoor or field. Oil or smokable flower. Available as URCs and liners.

Janet's G ~13% CBG

Medium-yielding CBG variety with strong disease resistance. Large trichomes stay snow white, extremely frosty when dried. Resists splitting. THC <0.15% at maturity. Photoperiodic/novel.

Field production. Oil or smokable flower. Available as URCs and liners.

Sunset 8-12% CBD

Very late flowering. 3-4 weeks later than most varieties when grown under natural days. Dense flowers with high terpenes (> 2%) and musky lemon aroma. Avoid in north due to late harvest dates. Use at or south of the 45th parallel. Photoperiodic.

Indoor or field. Oil or smokable flower. Available as URCs and liners.

Photoperiod requirements: FunDip, Peach Haze, and THM Jack all require a photoperiod >18 hours to avoid flowering. Other varieties have a critical photoperiod of 13:18 (Sunset), or 13:55 (Janet's G, Belle)

^aCompliant with regulations specifying total THC < 0.3%

^bAll CBD and CBG values are provided as potential levels. Realized CBD and CBG levels may vary with culture.

New for 2022!

THM produced feminized seed for Peach Haze.

New for 2022!

Feminized hemp seeds from partner High Alpine Genetics.

Feminized Seed from High Alpine Genetics

Alpen Gleaux

Autoflower genetics with large, purple buds. 80 days to harvest from germination. Terpenes strong in perfume/redwood. Direct sow for best results (avoid transplanting).

Frosted Grapes

Hybrid of Dream Tonic F2 and Alpen Gleaux. Huge, frosty, purple buds. Terpenes suggest grape juice. Photoperiodic with early harvest. Naturally lit crops flower in September.

Cashmere Kitty

F1 Fighter Line. Hybrid between Cats Meow CW and Alpen Gleaux. Bright pink to dark purple plants. Early September harvest from May planting under natural light. High CBD:THC ratio (30:1). Sour candy/perfume terpenes.

Pink Panther

F1 Fighter Line. Hybrid between Cats Meow and Alpen Gleaux. Strong vigor and yields. Bright pink/dark purple color. Terpenes reminiscent of fruity striped bubblegum. High CBD:THC ratio (30:1). Naturally lit crops mature in early September.

Shaolin Gleaux

F1 Fighter Line. Hybrid between Tangistam R4 and Alpen Gleaux. Strong purple color, dense buds. Suitable for all zones with early flowering and early harvest. Strong terpene producer, high in citrus. Good for indoor or field production and smokable flower. High CBD:THC ratio (30:1).

Top Selling Crop Nutrition and Crop Protection Products for THM Genetics

GGSPRO and The Hemp Mine speak the same language when it comes to crop nutrition and protection. Experts from both teams work together to bring you the best recommendations so you get the most out of your THM genetics. Some of our favorite products are listed below. Ask your Griffin rep for more nutrition, BCA, and crop protection options.
